COURSE PLAN

SEM/ Month	UNIT/TOPIC	Concepts/facts	Teaching Pedagogy	Learning Outcomes	Questions	Marks Weightage (%)
SEM I OCT- NOV	UNIT II Chemical Bonding Valence bond theory and its limitations, various types of hybridization. Valence shell electron pair repulsion (VSEPR) theory to NH_3 , H_3O^+ , SF_4 , ClF_3 , ICl_2 , and H_2O . MO theory, homonuclear and heteronuclear diatomic molecules, Comparison of VB and MO approaches.	Nature of Bonding according to VBT and MOT	Quiz, PPT, Visual 3-D Models	Summarize nature of covalent bonds and properties of ionic solids.	<u>Knowledge Based</u> - Define Hybridization. -What do you understand by n- type Semiconductors <u>Understanding Based</u> -Describe Frenkel defect. - Explain hybridization in ammonia molecule <u>Higher Order Thinking Skills Based</u> - Explain why He is a monoatomic gas? -Illustrate application of VSEPR Theory for deciding the shape of SF_4 molecule.	Knowledge--60 Understanding-30 Higher Order-10 <div style="text-align: right;"> <i>P. Laveena</i> <i>Tary</i> Head Department of Chemistry Sophia Girls' College (Autonomous) Ajmer </div>
	Ionic Solids Lattice defects, semiconductors, lattice energy and Born-Haber cycle, solvation energy and solubility of ionic solids, polarizing power and polarisability of ions, Fajan's rule.	Characteristics of Ionic Solids	Audio Visual Tutorials, Diagrams, PPT

COURSE PLAN

SEM/ Month	UNIT/TOPIC	Concepts/facts	Teaching Pedagogy	Learning Outcomes	Questions	Marks Weightage (%)
SEM III JULY- AUGUST	UNIT II Coordination Compounds Werner's coordination theory and its experimental verification, effective atomic number concept, chelates, nomenclature of coordination compounds, isomerism in coordination compounds, valence bond theory of transition metal complexes. Inner and outer orbital complexes of Cr, Fe, Co, Ni and Cu (coordination numbers 4 and 6), limitations of VBT	Basic Concepts and Theories of bonding in Coordination Compounds	Problem Solving, PPT, Visual 3D Models, Projects	Predict chemical properties of Coordination compounds, Lanthanides and Actinides.	<u>Knowledge Based</u> - Write the electronic configuration of Cr and Cu. - What is the Coordination number of metal in $[\text{Cr}(\text{CN})_6]^{4-}$ and $[\text{Cu}(\text{en})_2]^{2+}$?	Knowledge--50 Understanding-35 Higher Order-15
	Chemistry of Lanthanides Electronic structure, oxidation states and ionic radii and lanthanide contraction,	Extraction and Properties of lanthanides	Student Presentations, Flow Charts			

	complex formation, separation of lanthanides (ion-exchange method only).				
	Chemistry of Actinides General features and chemistry of actinides, chemistry of separation of Np, Pu and Am from U, similarities between the later actinides and the later lanthanides. Comparison of actinides with lanthanides.	General features of Actinides	PPT, Group discussions, E-Content		<u>Understanding Based</u> - Compare the oxidation states of second and third transition series elements with 1 st transition series Elements.
SEPT	UNIT I Chemistry of Elements of First, Second and Third Transition Series Characteristic properties of d-block elements, Periodic variation with special reference to electronic configuration, Atomic radii, Density, Ionisation Potential, Melting Point, variable Oxidation state, colour, magnetic, catalytic properties and ability to form complexes.	Characteristic properties transition series elements and their Comparative Periodic trends	Flipped Classroom, PPT, Assignments	Assess the chemistry of the first, second and third transition series.	-Classify Acids and Bases according to the Arrhenius and Bronsted Lowry Concept with the help of suitable examples. <u>Higher Order Thinking Skills Based</u>
OCT- NOV	UNIT III Acids and Bases Arrhenius, Bronsted-Lowry, the Lux-Flood, solvent system	Classification of Acids and Bases	Flow Charts, E-Content, Quiz	Illustrate oxidation reduction behaviour	- Calculate the magnetic

and Lewis concepts of acids and bases.			and aqueous and non - aqueous solvents.	moment of Cu in $[\text{Cu}(\text{NH}_3)_4]^{2+}$. - Explain why Ionisation Potential of third transition series elements is more than second transition series elements?	<i>Laveena</i>
Non-aqueous Solvents Physical properties of a solvent, types of solvents and their general characteristics reactions in non-aqueous solvents with reference to liquid NH_3 and liquid SO_2 .	Chemical reactions in non aqueous solvents	Flipped Classroom, PPT			
Oxidation and Reduction Use of redox potential data-analysis of redox cycle, redox stability in water-Frost, Latimer and Pourbaix diagrams. Principles involved in the extraction of the elements.	Analysis of Redox potential data	Problem Solving Activities, Diagrams

SEM II APRIL- MAY	UNIT I Electrochemistry Electrochemistry of solutions, Debye-Huckel-Onsager treatment and its extension, ion solvent interactions. Debye-Huckel-Bjerrum model. Semiconductor interfaces-theory of double layer at semiconductor, structure of double layer interfaces. Effect of light at semiconductor solution interface. Overpotential, exchange current density, derivation of Butler-Volmer equation, Tafel Plot. Polarography theory, Ilkovic	Concepts related to Double layer interfaces, Polarography, Over potential and Corrosion.	Diagrams, PPT, Student Projects and Assignments	Explain the electrochemistry.	<u>Knowledge Based</u> - Write Ilkovic equation. - What do you mean by reverse micelles? <u>Understanding Based</u> - Discuss the Cathodic Protection of Corrosion of metals.	Knowledge-25 Understanding-45 Higher Order-30

	equation; half wave potential and its significance. Corrosion – Types, mechanism and inhibition.				- Discuss the Kinetics of addition polymerization.	
	UNIT II Adsorption Pressure difference across curved surface (Laplace equation), vapour pressure of droplets (Kelvin equation), Gibbs adsorption isotherm, estimation of surface area (BET equation without derivation), mechanism of surface catalytic reactions.	Phenomenon of adsorption, Adsorption isotherms and pressure changes as result of curved interfaces.	E-Content, Presentation by students	Summarize the concepts of adsorption and micelles.	<u>Higher Order Thinking Skills Based</u> -Calculate the number average molar mass of a polymer containing 20 molecules with a mass of 20,000 and 50 molecules with a mass of 20,000. -Derive Kelvin Equation for Vapour Pressure of Droplets.	
	Micelles Surface active agents, classification of surface active agents, micellization, hydrophobic interaction, critical micellar concentration (CMC), factors affecting the CMC of surfactants, counter ion binding to micelles, thermodynamics of micellization, solubilization, microemulsion, reverse micelles.	Micellization and its applications	Student Presentations, Audio Visual Tutorials, E-Content			
	UNIT III Macromolecules: Polymer- definition, types of polymers kinetics and mechanism	Kinetics and Mechanism of Polymerisation and Molar mass	Problem Solving, Flow Charts, PPT	Assess the chemistry of macromolecules.		

	of polymerisation. Number and mass average molecular mass, molecular mass determination (osmometry, viscometry, diffusion, sedimentation), chain configuration of macro molecules, calculation of average dimensions of various chain structures. electrically conducting, Fire resistant, liquid crystal polymers.	determination of polymers					<i>Pearl</i>

SOPHIA GIRLS' COLLEGE (AUTONOMOUS), AJMER
M.Sc. CHEMISTRY (PREVIOUS)
SEMESTER II

PRACTICALS (CHEM-205)

Max. Marks: 100 (70 Ext; 30 Int)

Min. Marks: 40 (28 Ext; 12 Int)

Credit: 06

SEM/ Month	UNIT/TOPIC	Concepts/facts	Teaching Pedagogy	Learning Outcomes	Questions	Marks Weightage (%)
SEM II	PHYSICAL CHEMISTRY (i) Determination of strengths of halides in a mixture potentiometrically. (ii) Determination of the strengths of strong and weak acids in a given mixture using a potentiometer/pH meter. (iii) Determination of partition coefficient of I ₂ between water and CCl ₄ .	Laboratory Techniques and Use of Various Instruments	Laboratory Experiments and Demonstration of working of Various instruments	Understand the practical applications of various aspects of chemistry	<u>Knowledge Based</u> - Practical File Completion <u>Understanding Based</u> -To determine the strength of Oxalic Acid using Potentiometer. <u>Higher Order Thinking Skills Based</u> -Viva- Voce	<div><i>Laveena</i></div> <div><i>Taxy</i> Head Department of Chemistry Sophia Girls' College (Autonomous) , Ajmer</div>

GROUP-A INORGANIC CHEMISTRY
SEMESTER IV

INORGANIC POLYMERS - CHEM – 403(A)

Max. Marks: 100 (70 Ext; 30 Int)

Min. Marks: 40 (28 Ext; 12 Int)

Credit: 06

COURSE PLAN

SEM/ Month	UNIT/TOPIC	Concepts/ Facts	Teaching Pedagogy	Learning Outcomes	Questions	Marks Weightage (%)
	UNIT-I					
	Basics Concepts Definition, Classifications by Connectivities, Classifications by Dimensionality, the Metal/Backbone Classification of Metal-Containing Polymers.	Introduction and Classificatio n of Inorganic Polymers	Audio Visual Tutorials, 3D Diagrams	Elaborate basic concepts and synthesis of Inorganic polymers.	<u>Knowledge Based</u> - Give one example of Inorganic polymer displaying connectivity 4. -Define Tensile Strength.	Knowledge--25 Understanding- 45 Higher Order-30
	Inorganic Polymer Synthesis Step Growth synthesis, Chain Polymerization, ring opening polymerization, Reductive coupling and	Synthesis of Inorganic polymers.	Flow Chart, Flipped Classroom, PPT		<u>Understanding Based</u> - Summarize the	

	other Redox Polymerisation reactions.				method of TG Analysis of Polymers.	
	UNIT-II Inorganic Polymer Characterization Average Molecular Mass and Degree of Polymerization, Methods of Characterizing Average Molecular Mass- Gel Permeation Chromatography, Viscosity, Universal Calibration, Colligative Properties (Freezing point depression, boiling Point elevation and Osmotic Pressure), End-Group Analysis, Ultracentrifugation.	Determination of molecular weight of Inorganic Polymers	Audio Visual Tutorials, Problem Solving	Analyse the Chemical nature of polymers	- Discuss the Preparation of Silicones by any two methods.	
	Analysis and testing of polymers Chemical analysis of polymers, spectroscopic methods (IR and NMR), X-ray diffraction study, thermal analysis and physical testing-tensile strength, Fatigue, impact, tear resistance, hardness and abrasion resistance.	Various methods for analysis of Polymers	Diagrams, E-content, Assignments		<u>Higher Order Thinking Skills Based</u> - How NMR is used for Stereochemical Configuration of a Macromolecule - Calculate P.D.I. of a polymer in which Weight average and number average molar mass is 1, 00,000 and 1, 20,000.	<i>Laveena</i> <i>Taxy</i> Head Department of Chemistry Sophia Girls' College (Autonomous), Ajmer
	UNIT-III Polymers based on Boron – Borides, Carborane Polymers, Borazine, Boron Nitride Polymers based on Silicon-Silicones - Preparation and properties of Silicones, Modification of Silicones Polysilanes and related polymers - Structure, Synthesis, Physical and electronic properties of polysilanes, Chemical modification of Polysilanes.	Chemistry of Boron polymers	PPT, Flipped Classrooms	Summarize the Properties of Inorganic Polymers.		
		Preparation, properties and structure of Silicon Polymers	E-Content, Peer Group Teaching, Projects
